Description

Atomic Order is casual simulation game where the player can tap the display to propel a ball towards a cluster of balls. The balls will group together based on certain rules. Balls will disappear if more than three balls are grouped.

There are five main levels:

- Blob consists of a spherical group of balls.
- Long Island consists of a cylindrical string of balls.
- Fluidic Space consists of a spatial distribution of balls with certain attractor rules.
- Dance of the Atoms consists of a spatial distribution of balls with certain attractor and repel rules.
- Rotating Blob consists of a rotating spherical group of balls.

Each level consists of 125 sublevels. The full game has a total of 625 sublevels, offering hours of fun.

About

GridSky Software AS was founded by Ole Holthe [<https://linkedin.com/in/oleivarholthe>] in 1996 where he has explored many new game-related technologies. The company has no employees. We are currently exploring new game concepts, such as Atomic Order. <http://gridsky.com>
